Subject Approvals Review

GVW make the following general comments:

1) GVW support a more formalised and transparent risk based methodology to help EPA determine works or operational type applications. This should help ensure relevant information provision and also consistent, timely and expert assessment. It is also considered important that solutions incorporate an integrated environmental management perspective to ensure that overall environmental impacts are managed sensibly (e.g. potential for offsets etc) and in context with the local and wider TBL.

2) GVW has previously provided detailed comment regarding Section 30a issues (refer email to Robina Weir 10/8/12).

3) GVW's Corporate Licence review has been postponed from the original review date and GVW supports a more formalised licence review system and performance recognition initiatives.

If you would like to discuss any of the above, please feel free to call.

Thanks

Alan
