

Dear EPA,

I hear by oppose the work approval application from Wyndham Council waste mountain expansion for next 30-40 years .

Why can't smart recycling technology applied in many overseas countries be applied to reduce the landfill that will not only create new job opportunities but also will reduce the landfill .

This application should not be approved at all as giving council with some fines will not resolve the serious bigger environmental impact .

We as a community are paying the rates for collection and responsible disposal of waste ,not to be dumped next door .This beauracracy needs to be stopped now.

I will be really disappointed if this is approved and will even consider moving from the Wyndham area where I lived from last 10 years .

Thanks
